Product Management Executive

About Vision

Vision Government Solutions is a leading high-tech firm providing cutting-edge software and services to the public sector. Our organization is at an incredible inflection point of growth, and we are looking for people with extraordinary ambition and drive to join our Engineering team, and dramatically accelerate their career trajectories.

Why This Tech Opportunity is Different

Finding the opportunity to learn, make an impact, and grow quickly is difficult for individuals early in their career, and there is typically a trade-off to make. Joining Vision requires no trade-offs. Our company is positioned for rapid growth and is led by a seasoned executive team who bring a problem-solving mindset similar to those of consultants. Instead of improving other companies, our team works to improve different departments within Vision. We are looking for the right person to join our Product Development team to help scale the growth of the entire organization.

What to Expect:

- Effectively manage the product roadmap based on our strategic goals and making correct trade-offs between user experience, customer desires, cost, and technical priorities

- Drive high visibility, complex initiatives with significant impact to our business

- Partner closely with the development and design team in an agile environment and continually improve ways of working. Conceptualize features based on user research and in-depth understanding of the user, and ensure features are built well, delivered on time and successfully rolled out

- Be responsible for delivering on KPIs, define appropriate metrics and track consumer behavior. Perform extensive data analysis to gain consumer insights, and proactively share updates on feature performance

- Develop effective stakeholder relationships across the organization and customer base. Communicate and present to senior decision makers on project progress and resolve issues efficiently

- Innovate in order to manage changing situations and enable the team to react quickly to the market needs, by breaking down requirements to release quickly and iterate. Identify opportunities to leverage solutions across the breadth of government services, as well as ways to scale technically and sustainably.

How to Succeed:

- We are looking for someone who is proactive, with a strong drive to get things done. Building an experience that customers love is hard work, where tenacity, perseverance and willingness to learn is important.

- Solid product management experience in a demanding, agile environment working directly with engineers and designers (ideally at least 5 years)

- Excellent written and verbal communication skills

- Proven record of successfully delivering high-impact, complex projects while managing risks

- Demonstrated ability to be a key influencer in the team's strategy

- A degree in Computer Science, Computer Engineering, Information Systems or related discipline is a bonus

- Experience with a consumer-facing product is a must

Compensation

Vision provides a compensation and benefits package that is competitive with other leading technology companies and includes paid time off (PTO), an attractive employee health insurance plan, a 401k plan, and more!
